ABSTRACT

A method of designing paint is disclosed, the method including the steps of: acquiring color numerical information of a designated color from a client
5   computer connected to a server computer, determining ingredients of the paint based on the acquired color numerical information and paint ingredient information, predicting performances of the ingredient-determined paint based on paint performance prediction information, and
10   verifying the predicted performances of the ingredient-determined paint. The step of predicting the performances and the step of verifying the predicted performances ensure the designing of paint of which performances are approvable.
